DILLON ROSE

Principal Full-Stack Engineer

(954) 579-2558 DR@dillonmrose.com linkedin.com/in/dillonmrose dillonmrose.com Seattle

SUMMARY

Principal full-stack engineer with 12 years of experience creating AI-powered experiences. Led two products from inception to scale, including Microsoft Copilot (~40M MAU). Deep grasp of the processes and structures required to ship products while ensuring live-site reliability and code health. Currently focused on agentic systems: coding harnesses, multi-agent orchestration, and eval-driven development. Eager to scale the next generation of AI products.

TECHNICAL SKILLS

Agentic Development

Software Factories

Eval-Driven Development

React TypeScript C#

Python

LEADERSHIP

Cross-Org Technical Strategy

Cross-Functional Collaboration

Technical Mentorship

Architecture Reviews

Engineering Culture

Knowledge Sharing

INTERESTS

Rock climbing

Construction

Guitar

EXPERIENCE

Principal Software Engineer

Microsoft Copilot — 01/2023 - Present

- Founding client engineer on Microsoft Copilot; built and scaled the client from zero to ~40M MAU across a desktop app, web, and embedded surfaces (Teams, Outlook, Windows, Bing)
- Architected an agentic software factory platform that autonomously fights engineering debt, using eval-driven development to measure agent quality; drove the flaky-test backlog to zero and retired 100+ stale feature flags
- Technical lead for the Copilot Client Platform (reliability, latency, auth, feature flagging) and advisor on agentic development across the client org
- Expanded Copilot's addressable user base by 10x by enabling support for unlicensed business users and licensed consumer users. Projected to unlock tens of millions of new licenses
- Cut commit-to-production lead time from 2 weeks to 3 days by re-architecting the deployment pipeline
- Drove full-stack design and implementation of Prompt Suggestions and Teaching Moments, an in-product tutorial system that onboards users and upsells paid features
- Ran an org-wide engineering talk series, recruiting speakers for 55+ talks; personally presented on agentic development, vector DBs, and engineering scorecards

Senior Software Engineer

Cortana — 01/2017 - 01/2023

- Incubated and scaled 'Play My Emails' experience to over 1M MAU
- Designed an audio streaming protocol replacing whole-file HTTP audio responses with streamed playback. This cut time-to-first-audio for email readouts and enabled seeking, scrubbing and variable playback speed
- Led a team of 5 engineers through a full rewrite of the 'Play My Emails' service, migrating from a deprecated internal platform to Microsoft Bot Framework with no user-facing disruption
- Developed email search and composition capabilities for the initial launch of the Harman Kardon Invoke

Software Engineer II

Microsoft Maps — 01/2016 - 01/2017

- Built offline search for the Windows Maps app, adapting Bing's online search stack to run on-device and curating the downloadable content to maximize offline recall given storage constraints
- Optimized map icon layout across multiple zoom levels on Bing Maps

Software Engineer

Bing — 06/2014 - 01/2016

- Optimized classifiers and rankers in Bing Local Search stack
- Reduced latency and business costs by developing rule-based classifier to serve head queries

EDUCATION

Dual B.S. in Computer Science and Mathematical Sciences

Florida Institute of Technology — 09/2010 - 05/2014
